

1. Health Check

The screenshot displays the Postman application interface. On the left, the 'COLLECTIONS' panel shows a tree structure with 'RAG MongoDB - Data Ingestion' expanded, and '1. Health Check' selected. The main workspace shows a GET request to '{{\$baseUri}}/api/health'. The 'Authorization' tab is active, showing 'Inherit a...' as the auth type. The response body is displayed in JSON format, showing a 200 OK status with a response time of 4 ms and a body size of 312 B. The response body contains the following JSON:

```
{  "status": "OK",  "message": "Server is running"}
```

4. List Available Files

The screenshot displays the Postman application interface. On the left, the 'COLLECTIONS' sidebar shows a tree view with 'RAG MongoDB - Data Ingestion' expanded, and 'GET 3. List Available Files' selected. The main workspace shows a REST client request configuration for the endpoint `{{baseUrl}}/api/files` using the GET method. The 'Pre-request' and 'Post-response' tabs are visible. The 'Body' tab is active, showing a JSON response with a status of '200 OK', a response time of '4 ms', and a size of '5.48 KB'. The JSON response is a list of two file objects, each containing 'name', 'path', 'size', 'modified', and 'type' fields.

```
